

Indicative noise levels - Bray

Noisy works and the type of works and description beginning **Monday 19 August**.

There will be times where residents on certain floors will be affected by cladding installation works, scaffold removal and/or window installation.

We will continue to carry out construction activities during workdays from 8am until 5pm Monday to Friday. This is to allow time for preparation work in the morning and for removing and tidying up at the end of the day. Noisy works are limited to between **9am** and **4pm**.

Cladding installation and window installations are progressing as indicated on the respective noise map (see right).

Brickwork Investigations will be carried out on the ground floor, floor one and floor two.

Please note, weekly scaffold checks are taking place to keep the structure safe and secure, and on occasion this may result in localised drilling in certain areas.
